Getting Started

Welcome to the Viet UC CMS. This chapter explains what the system is for, how to sign in, and the handful of patterns that work the same way on every screen. Once you understand the ideas here, the rest of the manual will feel familiar.

What Viet UC CMS Is For

Viet UC CMS is the home-healthcare operations platform for the Viet Uc clinic. You use it to run the day-to-day work of caring for patients in their homes, all in one place. It manages:

- **Contacts and leads** — people who enquire about your services.
- **Clients and patients** — the people you care for.
- **Bookings** — home-visit appointments.
- **Staff and assignments** — who is going to which visit.
- **Invoicing and payments** — billing for the care you provide.
- **A separate Nurse Mobile App** — used by nurses out in the field.

NOTE What you can see and do depends on your assigned role. For example, a nurse sees only the bookings they are assigned to and only clients in their catchment area; Finance staff see the Finance screens; an admin or owner sees everything. See the Appendix for the full role and visibility summary.

Logging In

This is how you open the system and reach your starting screen.

How to use it:

1. Open a web browser and go to **care.biztinct.com**.
2. Enter your **email** and **password**.
3. Sign in. After login you land on a dashboard — typically the **Operations Center**, depending on your role.

TIP The dashboard you see first is chosen for your role, so two different staff members may land on different screens. That is normal.

Finding Your Way Around

This section explains the two parts of the screen you will use constantly: the left sidebar (for navigation) and the main area (where each screen opens).

Figure: The Operations Center dashboard, showing the left sidebar, the period filter row, the KPI cards, and the green refresh button.

The Left Sidebar

The left sidebar is your main navigation. It stays available so you can move between screens at any time.

What you see on this screen:

- The **Viet Uc logo / company** at the top.
- Four **collapsible sections**: **CRM**, **OPERATIONS MANAGER**, **FINANCE**, and **ADMIN**.
- The individual menu items inside each section.

How to use it:

1. Click a section heading (CRM, Operations Manager, Finance, or Admin) to expand or collapse it and reveal its items.
2. Click any item to open that screen in the main area to the right.

NOTE You may not see every section. The sidebar shows only the areas your role gives you access to.

The Top Bar

The top bar runs across the top-right of every screen and gives you quick tools no matter where you are.

What you see on this screen:

- A **search** box.
- A **chat / messages** counter.
- An **activities** counter.
- The **company name**.
- Your **user menu**.

Patterns You Only Need to Learn Once

These behaviors work the same way everywhere in the system. Learn them here and you will recognise them on every screen.

The Period Filter

Every dashboard has a period filter row across the top. It controls the time range that all the numbers on the page are based on.

What you see on this screen:

- A row of choices: **Today**, **This Week**, **This Month**, **All Dates**, and **Custom**.

How to use it:

1. Click a period (for example, **This Week**) to re-scope every figure on the page to that time range.
2. Choose **Custom** to set your own date range.

NOTE Changing the period updates *every* figure on the page at once, not just one card.

KPI Cards and Drill-Down

KPI cards are the summary tiles on a dashboard, each showing a key number. They are not just for reading — they are clickable.

How to use it:

1. Click a KPI card.
2. The system opens the underlying filtered list — the records behind that number. This is called a **drill-down**.

TIP Drill-down is the fastest way to go from "how many" to "exactly which ones." If a number looks surprising, click it to see what is inside.

Lists and Forms

Most screens show a **list** of records, and each list opens into a detailed **form**.

How to use it:

1. On a list, use the **search** box or the **filter tabs** to narrow down what you see.
2. Click a row to open its detailed record (the **form**).
3. To go back, use the **breadcrumb** at the top-left of the screen.

The Chatter on Forms

Every form includes a "chatter" panel that keeps a history of the record.

- It records a **log of activity and history** for that record.
- It lets you **schedule follow-ups** so nothing is forgotten.

The Refresh Button

When you want the latest figures, use the green refresh button.

How to use it:

1. Click the green **Refresh** button.
2. The current dashboard reloads its data.

TIP If you have just made a change elsewhere and want to confirm it shows up, click Refresh rather than reloading the whole browser.

The AI Coach

A floating **AI Coach** button sits in the bottom-right corner of the screen.

How to use it:

1. Click the **AI Coach** button at any time.
2. It offers in-app help to guide you while you work.

TIP If you get stuck on a screen, the AI Coach is the quickest place to ask for help without leaving what you are doing.

CRM — Contacts & Leads

The CRM section is where you manage enquiries — the people who call, message, or reach out to the clinic — and guide each one along their journey toward a confirmed booking. This chapter covers the three items in this section: the **Dashboard**, **Contacts**, and **Activities**.

Overview

Every enquiry becomes a **contact**. As you work with that person, their status moves through a simple lifecycle:

- **Active (Initial Contact)** — a new enquiry has just come in.
- **Lead** — you have marked them for future follow-up.
- **Booking** — a service has been booked for them.
- **Lost Booking** — a booking fell through.
- **Spam** — the enquiry is junk and is flagged to ignore.

The Dashboard gives you the big picture, Contacts is where you do the day-to-day work, and Activities is your shared follow-up to-do board.

Dashboard

CRM Dashboard

The CRM Dashboard is your at-a-glance command center. Use it at the start of your shift to see how many enquiries came in, what still needs follow-up, and how the team is doing on conversions.

Figure: The CRM Center dashboard with KPI cards, charts, and activity feeds

What you see on this screen

- A header titled "**CRM Center — Sales & Contact Management**".
- A **period filter** at the top — choose **Today**, **Week**, **Month**, **All**, or **Custom** — plus a **refresh** button to reload the latest numbers.
- A row of **KPI cards**, each one clickable:
- **Contacts Today** — enquiries received today.
- **Pending Follow-ups** — leads that are waiting for you to follow up.
- **Active Leads** — leads currently in progress.
- **Bookings This Week** — bookings created this week.
- **Conversion Rate** — your conversion rate this month.
- **Spam Rate** — the share of enquiries marked as spam.
- A second strip of stats: **New This Month**, **Converted**, **Lost**, and **Active Pipeline**.
- A "**Contact Pipeline**" donut chart breaking contacts down by status (Booking / Lead / Lost Booking / Spam).
- A "**Source Channels**" bar chart showing where your contacts came from.
- Three feed panels:
- **Recent Contacts** — each entry shows a status dot, the name, the channel, and the time.
- **Upcoming Bookings** — the bookings coming up next.
- **Contact Status** — a bar per status with its count.

How to use it

1. Choose a time range in the **period filter** (Today / Week / Month / All / Custom). The whole dashboard updates to that range.
2. Click **refresh** at any time to pull the latest figures.
3. Click any **KPI card** to drill straight into a filtered list of the matching contacts or bookings.
4. In the **Contact Pipeline** donut, click a segment (for example, **Lead**) to open the contacts filtered to that status.
5. In **Recent Contacts**, click a row to open that contact, or click **View All** to open the full contacts list.
6. In **Upcoming Bookings**, click an entry to open that booking.

TIP Every KPI card and every chart segment is a shortcut. If a number looks surprising, click it to see exactly which contacts it represents.

Contacts

Contacts

Contacts is your working list of every enquiry. From here you can see each person's status, take quick action on them, and open their full record. This is where most of your day-to-day CRM work happens.

Figure: The Contacts list with status tabs and quick action buttons on each row

What you see on this screen

- Tabs to filter the list: **All**, **Active**, **Leads**, **Bookings**, **Lost**, and **Spam**.
- **Date filters** to narrow the list by when contacts came in.
- On each row, a set of **quick action buttons**: **Book**, **Log Activity**, **Escalate**, and **Spam**.

How to use it

1. Click a tab (for example, **Leads**) to show only contacts with that status.
2. Use the **date filters** to focus on a specific time period.
3. On any row, use the quick action buttons to act without opening the contact (see the button reference below).
4. Click a contact's row to open its full **contact form**.

Contact form

Opening a contact shows its full form, with all the key action buttons in the header. Use this when you want to work a single enquiry in detail — book them in, log a follow-up, escalate, or close them out.

The screenshot displays the 'Contact form' for a contact named 'Lê Thị Hồng' (Lead) in the Viet UC CMS. The interface includes a sidebar with navigation options like CRM, Dashboard, Contacts, and various operational and financial tools. The main content area is titled 'Dashboard > Contacts > Lê Thị Hồng' and features a header with the contact's name, phone number (0934567890), and a 'Lead' status tag. Action buttons for 'Book', 'Log Activity', 'Escalate', and 'Spam' are visible. The form is divided into sections: 'CONTACT INFORMATION' (Contact Name, Phone, Email, Mode of Contact, Contact Date/Time), 'Client Details' (Client Name, Service Interest, Clinical Priority), and 'Reason for Contact' (Reason for Contact, Lead Reason, Contacting On Behalf Of, Service Requirements). A 'History' section at the bottom shows a single event: 'Contact Created' (Phone Call) on June 8, 21:20. An 'AI Coach' button is located in the bottom right corner.

Figure: The contact form with action buttons in the header

What you see on this screen

- The contact's details.

- A header with the key action buttons: **Book**, **Log Activity**, **Log as Lead**, **Escalate**, **Spam**, and (when the contact is already a booking) **Booking Lost**.

How to use it

1. To turn the enquiry into a booking, click **Book**. The **Quick Booking** wizard opens. It searches existing clients so you don't create a duplicate — confirm the matching client or create a new one, then fill in the **service type**, **facility**, **date/time**, and **duration**. Click **Create Booking** to create the booking; the contact's status changes to **booking**.
2. To schedule a follow-up, click **Log Activity** and set up a call or meeting on the contact.
3. To keep the enquiry for later, click **Log as Lead**. The status changes to **lead**.
4. To hand the contact to a specialist, click **Escalate**. The contact is routed to the Head Nurse, OM, or Duty Doctor.
5. If the enquiry is junk, click **Spam**. The contact is marked as spam and its phone number is flagged for the future.
6. If a booking fell through, click **Booking Lost** (shown only when the status is **booking**) and record the lost-booking reason.

Button reference

Button	What it does	Resulting status
Book	Opens the Quick Booking wizard; find/confirm the client, fill service type, facility, date-time, duration, then Create Booking	booking
Log Activity	Schedules a follow-up activity (call/meeting) on the contact	(unchanged)
Log as Lead	Keeps the contact for future follow-up	lead
Escalate	Routes the contact to a specialist (Head Nurse / OM / Duty Doctor)	(unchanged)
Spam	Marks the contact as spam and flags the phone number	spam
Booking Lost	Records a lost-booking reason (only when status is booking)	lost_booking

NOTE The **Book** wizard checks for existing clients before creating a new one. Always confirm a suggested match when it appears, so you avoid duplicate client records.

TIP The quick action buttons on the list rows (**Book**, **Log Activity**, **Escalate**, **Spam**) do the same thing as the matching buttons on the contact form — use whichever is faster for what

you're doing.

Activities

Activities

The Activities board is the team's shared follow-up to-do list. Every call, meeting, email, or task you schedule on a contact shows up here, so nothing slips through the cracks.

Figure: The Activities board grouped by activity type

What you see on this screen

- A board of scheduled activities grouped by type: **To-Do**, **Email**, **Call**, **Meeting**, and **Document**.
- A **Type filter** to show only one kind of activity.
- A **Date filter**: **All Dates**, **Today**, **This Week**, or **This Month**.
- A **+ Schedule activity** button.

How to use it

1. Use the **Type filter** to focus on a single activity type (for example, only **Call**).
2. Use the **Date filter** to show activities due **Today**, **This Week**, **This Month**, or across **All Dates**.

3. Click + **Schedule activity** to open the picker, choose the contact, and schedule the activity.

TIP Check this board regularly — it's how the whole team keeps track of who needs a follow-up and when.

Operations Manager — Bookings, Staff & the Service Workflow

The Operations Manager section is where you run day-to-day home-visit operations: seeing what is happening today, taking bookings from first request through to a closed, paid visit, managing your clients and staff, assigning nurses, and reconciling the cash they collect in the field.

This section contains: the **Dashboard** (Operations Center), **Bookings**, **Clients**, **Staff** (Roster / Schedules / Time Off), **Staff Assignment**, **Collections**, and **Workload**.

Dashboard (Operations Center)

Operations Center

The Operations Center is your live "command desk" for the day. Use it first thing in the morning and throughout the day to see every booking, spot the ones that still need a nurse, and assign staff in a single click.

Figure: The Operations Center dashboard with KPI cards, booking queue, staff roster, and timeline

What you see on this screen:

- **Top controls:** date navigation (previous / next arrows and the current date), a period filter (Today / Week / Month / All / Custom), a Facility filter (All Facilities or a single facility), and a refresh button.
- **KPI cards:** Total Bookings, Needs Assignment (with an urgent / normal breakdown), Active Now (visits in progress), Completed, and Revenue.
- **Booking Queue panel** with three tabs: "Needs Staff" (with a badge count), "All Today", and "Issues". Each booking card shows the time, the booking ID, an **URGENT** badge if it is high priority, a status chip, a 3-dot menu, the client name, and the service type, duration, and location. Unassigned cards also have an inline **Assign:** dropdown.
- **Staff Roster panel:** each staff member shown with an avatar, a status dot, their name, and today's booking count.
- **Today's Timeline:** a time grid from 7am to 6pm with a row per staff member and colored service blocks. A legend explains the colors: Home Visit, Clinic, Consult, Follow-up.
- **Footer buttons:** "View All Bookings" and "Create Booking".

How to use it:

1. Set the **period filter** (Today / Week / Month / All / Custom) and the **Facility filter** to choose what you are looking at; the whole dashboard updates to match.
2. Use the **prev / next** arrows to move the date backward or forward, and **refresh** to pull the latest data.
3. Read the **KPI cards** to gauge the day at a glance; the Needs Assignment card tells you how many bookings (and how many urgent ones) still have no nurse.
4. In the **Booking Queue**, click the **Needs Staff** tab to see only bookings waiting for a nurse, **All Today** for everything today, or **Issues** for problem bookings.
5. To staff an unassigned booking fast, open its **Assign:** dropdown — it lists available staff together with their current workload — and pick one. The nurse is assigned in a single click.
6. To do more with a booking, open its **3-dot menu**: View Details, Assign Staff, Start Service, Collect Payment, or Cancel. Each opens the matching screen or action.
7. In the **Staff Roster**, click any staff member to open their record.
8. Use **Create Booking** to start a new booking, or **View All Bookings** to jump to the full Bookings list.

TIP The "Needs Staff" badge count and the "Needs Assignment" KPI are the two numbers to keep at zero — clear them and every client for the day has a nurse.

Bookings

A booking is one scheduled home visit, from the moment you create it to the moment it is closed and paid. This is the heart of your day, so the workflow below is described step by step.

Viewing bookings (List & Calendar)

You can view your bookings as a sortable list or as a calendar, whichever suits the task.

BOOKING	CLIENT	PHONE	SERVICE	SCHEDULED	STAFF	STATUS	PRIORITY
An Xu (New Booking)	An Xu	0772965280	Home Visit	Jul 9, 12:00 PM		Draft	Normal

27	28	29 12:00 PM An Xu Unassigned	30	1	2 12:00 PM An Xu Unassigned	3

Figure: The Bookings calendar view

What you see on this screen:

- A **list view** of all bookings.
- A **calendar view** that can be switched between Day, Week, and Month.

How to use it:

1. Use the **list view** to scan and sort many bookings at once.
2. Switch to the **calendar view** and choose **Day**, **Week**, or **Month** to see bookings laid out by time.
3. Click any booking to open its full record.

The booking record

Every booking opens to a single record that shows you exactly where it is in its life and what to do next.

Figure: A completed booking detail with lifecycle bar, summary cards, and quick actions

What you see on this screen:

- A **lifecycle progress bar**: Created → Confirmed → Assigned → In Progress → Completed → Closed.
- **Summary cards**: Scheduled, Service Type, Duration, Facility, and Catchment.
- **Client Information** and **Staff Assignment** panels.

- A **Next Best Action** panel that tells you the single most useful thing to do next.
- **Quick Actions:** Client Details, View Quote, View Payments, and View Assignments.

How to use it:

1. Read the **lifecycle progress bar** to see which stage the booking is at.
2. Follow the **Next Best Action** panel — it surfaces the right button for the current stage.
3. Use the **Quick Actions** to jump to the client, the quote, the payments, or the assignments without leaving the booking.

The full booking workflow

This is the complete journey of a booking. Each step lists the action you take, what it does, and what appears next.

Figure: A draft booking showing the Create Quote next best action

1. **Create the booking (Draft).** Click **Create Booking** (from the Operations Center or from a client profile). Fill in the client (the system de-duplicates so you do not create the same client twice), the service type, the facility, the date and time, and the duration. The booking saves as a **Draft**.
2. **Create the quote (still Draft).** On a draft booking, the **Next Best Action** panel shows **Create Quote**. Click it to add priced service lines, then save. Pricing can automatically apply distance-based travel charges.

3. **Confirm the booking (→ Confirmed).** Once a quote exists and the date is set, click **Confirm Booking**. This finalises the booking number and moves it to **Confirmed** — the client is now booked.
4. **Assign staff (→ Assigned).** Click **Assign Staff** (or use the **Assign** dropdown in the Operations Center). This creates the staff assignment(s): the first nurse is the **Lead** and any others are **Support**. The assigned nurse(s) receive a push notification.
5. **Start the service (→ In Progress).** Click **Start Service**. This stamps the actual start time and starts a timer; the booking now shows as **Active Now**.
6. **Add clinical notes.** During the visit, add clinical notes on the **Clinical tab**. This is required before you can complete the booking.
7. **Complete the service (→ Completed).** Click **Complete Service**. This stamps the end time. Bookings handled by full-time staff move to **Completed**; bookings handled by part-time staff move to **Completed-Pending-Invoice**, which means Operations must raise the invoice.
8. **Create the invoice.** Click **Create Invoice**. This opens the quote for a final review and generates the invoice.
9. **Collect payment.** Record the payment as cash or transfer.
10. **Close the booking (→ Closed).** Click **Close**. This finalises the booking and locks it.

Alternatives at any time before completion:

- **Cancel Booking** (available before Completed) opens a cancel wizard where you enter a reason and notes; it cancels the assignments and notifies the staff.
- **Reschedule** changes the date and time and reassigns staff.

Button reference:

Button	What it does	State after
Create Booking	Creates a new booking from the client and visit details	Draft
Create Quote	Adds priced service lines (may include travel charges)	Draft
Confirm Booking	Finalises the booking number; client is booked	Confirmed
Assign Staff	Creates assignment(s); first = Lead, others = Support; notifies nurses	Assigned
Start Service	Stamps start time and starts the timer	In Progress
Complete Service	Stamps end time	Completed (or Completed-Pending-Invoice for part-time staff)
Create Invoice	Opens the quote for review and generates the invoice	Completed

Close	Finalises and locks the booking	Closed
Cancel Booking	Opens cancel wizard; cancels assignments and notifies staff	Cancelled
Reschedule	Changes date/time and reassigns	(date/time changed)

NOTE The difference between full-time and part-time staff matters at step 7. Part-time visits land in **Completed-Pending-Invoice** and will not finish on their own — you must raise the invoice for them.

WARNING Clinical notes are required before you complete a service (step 6). If they are missing, you will not be able to move the booking to Completed.

Clients

Clients list

The Clients list is your directory of patients. Use it to find a client and immediately act on them.

CLIENT	PATIENT ID	PHONE	LAST VISIT	
An Xu	02 002402026	0772965280	Jun 8, 3:37 PM	+ Book C Recurring Collect Payment

Chu T	02 002712026	0754201493		+ Book C Recurring Collect Payment

Figure: The Clients list with patient details and quick actions

What you see on this screen:

- Each client row shows the **Patient ID**, **phone**, and **last visit**.
- Quick actions on each row: **Book**, **Recurring**, **Collect**, and **Payment**.

How to use it:

1. Find the client you need in the list.
2. Use the row quick actions: **Book** to create a one-off booking, **Recurring** to set up a repeating booking, **Collect** to record collected cash, or **Payment** to take a payment.
3. Click the client to open their full profile.

Client profile

The client profile is the complete picture of one patient — their history, their spend, where they live, and the route your nurse will drive.

Figure: A client profile with KPI cards, address, map route, and quick actions

What you see on this screen:

- **KPI cards:** Total Bookings, Active Packages, Total Spent, Outstanding, Satisfaction, and Referrals.
- **Address Details**, including the **driving distance** to the clinic.
- A **Map Location** showing the route.
- A **Create Booking** button and a **Quick Actions** panel: View Bookings, Create Recurring Booking, Quick Package Purchase, Create Invoice, View Invoices, and Purchased Packages.

How to use it:

1. Review the **KPI cards** to understand the client's history and any outstanding balance at a glance.
2. Enter or edit the **address** — it auto-geocodes, and the **route and distance** appear on the map.
3. Use **Create Booking** to start a booking for this client, or pick from **Quick Actions** to view bookings, set up recurring visits, purchase a package, create or view invoices, or see purchased packages.

NOTE The driving distance shown here feeds your pricing — it is what powers the distance-based travel charges that can appear on a quote.

Staff

Roster

The Roster shows who is on and how busy they are right now.

Figure: The staff roster showing availability and today's load

What you see on this screen:

- Each staff member's **availability** and **today's load**.

How to use it:

1. Check the roster to see who is available before assigning work.
2. Read each person's today's load to balance assignments fairly.

Schedules

Schedules show each staff member's regular working hours.

EMPLOYEE NAME	JOB	ROLE	WORK EMAIL	WORK PHONE	EMPLOYMENT STATUS	HEALTH...
☐ Admin HCMC		Admin			Active	View Assignments
☐ Admin Hanoi		Admin			Active	View Assignments
☐ CRM		CRM			Active	View Assignments
☐ Chúc					Active	View Assignments

☐ NGUYỄN MINH ANH					Active	View Assignments
☐ NGUYỄN THỊ HIẾN					Active	View Assignments
☐ NGUYỄN THỊ HẰNG					Active	View Assignments
☐ NGUYỄN THỊ MỸ LỆ					Active	View Assignments
☐ Nguyễn Như Anh					Active	View Assignments
☐ Nguyễn Thị Luyến					Active	View Assignments

Figure: Staff working-hours schedules

What you see on this screen:

- Each staff member's **working hours**.

How to use it:

1. Open Schedules to confirm a nurse's working hours before booking them into a visit.

Time Off

Time Off lists staff leave so you do not assign someone who is away.

What you see on this screen:

- A list of staff **leave**.

How to use it:

1. Check Time Off before assigning a visit to make sure the nurse is not on leave.

Staff Assignment

Staff Assignment timeline

Staff Assignment is a timeline view of every assignment across all your staff and the day, so you can see who is doing what and when.

Figure: The staff assignment timeline across staff and time

What you see on this screen:

- A **timeline** of assignments laid out across staff and time.

How to use it:

1. Read the timeline to see each nurse's assignments through the day.
2. Track each assignment through its lifecycle: **assigned** → **confirmed** (the nurse accepts in the mobile app) → **in_progress** (the nurse starts) → **completed**.

NOTE Nurses accept, start, and complete their assignments from the mobile app. See the Mobile chapter for how the nurse side works.

Collections

Collections

Collections is where you reconcile the cash your nurses collect in the field. When a nurse takes cash on a visit, it is marked "pending delivery" to the office; here is where the office confirms it has arrived.

Figure: The collections screen for reconciling field cash

What you see on this screen:

- Cash collected by nurses in the field that is **pending delivery** to the office.

How to use it:

1. Review the cash listed as pending delivery.
2. Reconcile each amount as it is handed in to the office.

TIP Reconciling Collections regularly keeps your field cash and your office records in sync, so nothing collected on a visit goes unaccounted for.

Workload

Workload

Workload is a dashboard of how busy your staff are, so you can spread visits evenly and avoid overloading anyone.

Figure: The workload dashboard of staff utilisation and assignment load

What you see on this screen:

- A dashboard of **staff utilisation** and **assignment load**.

How to use it:

1. Review each staff member's utilisation and assignment load.
2. Use what you see to rebalance work — move assignments away from overloaded staff toward those with spare capacity.

Finance — Invoicing, Payments & Receivables

The Finance section is where you handle everything to do with money: creating bills (invoices), collecting payments, and keeping track of who still owes you (accounts receivable, or "AR"). This chapter walks you through each screen, from the at-a-glance Dashboard down to the detailed receivables ledger.

The Finance menu contains these items:

- **Dashboard** — the Finance Center overview
- **Invoices** — create and manage bills
- **AR Dashboard** — see outstanding receivables and aging
- **AR Management** — Account Payment, Cash In Transit, Refund / Credit
- **Payments** — every payment transaction
- **Overdue Clients** — your collections worklist
- **VAT Log** — VAT / red-invoice tracking
- **AR Transactions** — the detailed receivables ledger

Dashboard (Finance Center)

Finance Center

This is your home base for finance. It gives you a single, live overview of revenue, money owed to you, cash collected, and recent activity, so you can spot what needs attention without digging through lists.

Figure: Finance Center dashboard with KPI cards, recent payments and revenue trend

What you see on this screen:

- **Header** — titled "Finance Center — Billing, Payments & Accounts Receivable", with a **New Invoice** button and a **period filter** to choose the time range you are looking at.
- **KPI cards** (each one is clickable and drills down to the underlying details):
 - **Revenue** — income for this period, from posted invoices.
 - **Outstanding AR** — amounts that are unpaid or only partially paid.
 - **Overdue Amount** — money past its due date.
 - **Cash Collected** — payments you have taken in.
 - **Active Packages** — count of active packages plus their remaining value.
 - **Pending Delivery** — nurse cash that is still in transit to the clinic.
- **Red-Invoice status row** (Vietnamese VAT e-invoices) — may show counts for Red Invoices Issued, Failed, Pending Issue, and Cancelled.
- **Recent Payments** — a list showing avatar, client, reference, method, amount, and a status badge (such as Collected, Pending Delivery, or Reconciled).
- **Revenue Trend** — a bar chart of the last 6 months.
- **Quick Actions** — shortcut buttons: New Invoice, Payments, AR Dashboard, VAT Log.
- **Invoice Status breakdown** — totals by status: Draft, Posted, Paid, Partial, Overdue, Cancelled.

How to use it:

1. Use the **period filter** in the header to set the date range. All KPI cards update to match the period you choose.
2. Click any **KPI card** (for example, Outstanding AR) to drill down into the list of records behind that number.
3. Click a row in **Recent Payments** to open that individual payment and view its full details.
4. Click a **Quick Action** button to jump straight to that screen: **New Invoice** starts a new bill, **Payments** opens the payment list, **AR Dashboard** opens receivables, and **VAT Log** opens VAT tracking.
5. Read the **Invoice Status breakdown** to see how many invoices are still Draft, Posted, Overdue, and so on.

TIP The KPI cards are the fastest way to investigate a number that looks off — if Overdue Amount seems high, click it to see exactly which invoices are late.

Invoices

Invoices

This is where bills live. Use it to create new invoices, review existing ones, confirm them so they count as revenue, and track whether they have been paid.

NUMBER	PATIENT	DATE	SERVICE T...	TOTAL	AMOUNT DUE	PAYMENT	RED INVOICE
INVJ/2026/00097	Nguyễn Văn An	Jun 8		450,000.00	450,000.00	Not Paid	Issued

Figure: Invoices list with status tabs and date filters

What you see on this screen:

- **Status tabs** — to filter invoices by their stage.
- **Date filters** — to narrow the list to a chosen time range.
- A row per invoice, showing the client and key details.

When you open a single invoice, the form looks like this:

The screenshot displays the Viet UC CMS interface for creating an invoice. The sidebar on the left contains navigation menus for CRM, OPERATIONS MANAGER, and FINANCE. The main content area shows the 'Customer Invoice' form for INV/2026/00097. Key details include the customer name 'Nguyễn Văn An', invoice date 'Jun 8', and due date 'Jun 8'. A table of 'Invoice Lines' lists a single item: 'Home Visit — Nursing Care' with a quantity of 1.00 and a price of 450,000.00. The total amount is 450,000 VND, and the status is 'NOT PAID'. The interface includes buttons for 'Send', 'Print', 'Pay', 'Preview', 'Credit Note', 'Reset to Draft', 'Download Red Invoice', 'Open Red Invoice', 'Cancel Red Invoice', 'Draft', and 'Posted'.

Figure: Invoice form showing client, line items, totals and payment status

- **Client** — who the invoice is billed to.
- **Line items** — the services or products being charged.
- **Totals** — the overall amount due.
- **Payment status** — whether the invoice is Draft, Posted, Paid, and so on.

How to use it — the invoice-to-payment workflow:

1. An invoice is created from a completed booking, or by clicking **New Invoice**.
2. The invoice starts as **Draft**. While it is Draft, you can still edit it.
3. Click **Confirm / Post** to post the invoice. Once posted, it counts as revenue and as outstanding AR.
4. Register a **payment** against the invoice (cash or bank transfer).
5. When the invoice is fully paid, its status automatically becomes **Paid**.

NOTE Vietnamese "red" / VAT invoices can additionally be issued for a posted invoice. When that happens, the invoice appears in the **VAT Log**.

Invoice statuses at a glance:

Status	What it means
Draft	Newly created and still editable; not yet counted as revenue.

Posted	Confirmed; now counts as revenue and outstanding AR.
Partial	Some payment received, but a balance remains.
Paid	Fully paid.
Overdue	Posted and unpaid past the due date.
Cancelled	Voided; no longer owed.

WARNING Only edit an invoice while it is in **Draft**. Once you post it, it counts toward revenue and receivables, so changes should be made carefully.

Accounts Receivable

AR Dashboard

The AR Dashboard shows everything still owed to you (your outstanding receivables). Use it to answer "who owes us, how much, and how late is it?" — including aging.

Figure: AR Dashboard showing outstanding receivables as list, pivot and graph

What you see on this screen:

- Outstanding receivables presented as a **list**, a **pivot**, and a **graph**.

How to use it:

1. Use the **list** view to scan individual outstanding amounts by client.
2. Switch to the **pivot** view to summarize and group the receivables (for example, by client or period).
3. Switch to the **graph** view to see the totals and aging visually.

TIP Use this screen to understand aging — how long invoices have been outstanding — so you know which clients to follow up with first.

AR Management

AR Management is a sub-menu with three tools for working with receivables: recording payments, tracking nurse cash, and issuing credits.

Figure: Accounts receivable transactions ledger

What you see in this sub-menu:

- **Account Payment** — opens a payment-collection wizard so you can record a payment against a client or invoice.
- **Cash In Transit** — nurse cash that is pending delivery to the clinic (this is the same as **Pending Delivery** on the Dashboard).
- **Refund / Credit** — customer credit notes.

How to use it:

1. Choose **Account Payment** when a client pays you. The payment-collection wizard opens; record the payment against the relevant client or invoice.
2. Choose **Cash In Transit** to see cash a nurse has collected that has not yet been delivered and reconciled at the clinic.
3. Choose **Refund / Credit** to issue a customer credit note.

NOTE "Cash In Transit" and the Dashboard's "Pending Delivery" KPI refer to the same thing — nurse cash that has not yet reached the clinic.

Payments & Collections

Payments

This screen lists every payment transaction. Use it to confirm a specific payment, check its method and amount, or see whether the money has been reconciled.

TRANSACTION ID	TRANSACTION DATE	CLIENT	PHONE	PAYMENT AMOUNT	PAYMENT METHOD	TRANSACTION STATUS	PAYMENT STATUS	COLLECTED BY	CURRENCY

Figure: Payments list with method, amount, date and status

What you see on this screen:

- One row per payment, showing the **method**, **amount**, **date**, and **status**.

Payment statuses:

Status	What it means
--------	---------------

Collected	The payment has been taken.
Pending Delivery	Nurse cash that has not yet been delivered to the clinic.
Delivered	The cash has been delivered.
Reconciled	The payment has been matched and confirmed in the books.

How to use it:

1. Scan the list to find the payment you need by client, date, or amount.
2. Click a payment row to open it and view its full details.
3. Check the **status** column to know where each payment is in its lifecycle, from Collected through to Reconciled.

Overdue Clients

This is your collections worklist: posted invoices that are unpaid and past their due date. Use it to know exactly who to chase for payment.

PATIENT	INVOICE	DUE DATE	TOTAL	OUTSTANDING	STATUS
☐ Phan Anh	INV/2026/00093	Jun 5	2,200,000.00	2,200,000.00	Not Paid

Figure: Overdue clients list of posted, unpaid, past-due invoices

What you see on this screen:

- A list of **posted, unpaid invoices that are past their due date.**

How to use it:

1. Open this screen to get your list of overdue accounts.
2. Work through the clients, following up with each one to collect payment.
3. As payments come in and invoices are settled, they drop off this list.

TIP Check Overdue Clients regularly — it is the most direct way to keep receivables under control.

Tax & Ledger

VAT Log

The VAT Log tracks posted customer invoices for VAT and red-invoice purposes. Use it when you need to review or follow up on Vietnamese VAT e-invoices.

Figure: VAT Log of posted customer invoices for VAT and red-invoice tracking

What you see on this screen:

- A list of **posted customer invoices** tracked for VAT / red-invoice purposes.

How to use it:

1. Open the VAT Log to review the posted invoices relevant to VAT.
2. Cross-check against the Dashboard's Red-Invoice status row (Issued, Failed, Pending Issue, Cancelled) to confirm which red invoices still need attention.

NOTE A Vietnamese "red" / VAT invoice can be issued for a posted invoice; once issued, it is tracked here.

AR Transactions

AR Transactions is the detailed receivables ledger. Use it when you need the full, line-by-line history of receivables rather than a summary.

Figure: AR Transactions detailed receivables ledger

What you see on this screen:

- The detailed **receivables ledger** — every receivable transaction in full detail.

How to use it:

- Open AR Transactions when you need to trace a receivable in depth.
- Review the individual entries to reconcile balances or investigate a specific client's account.

TIP Use the AR Dashboard for the big picture and aging, then come to AR Transactions when you need the detailed, transaction-level record.

Admin — Users, Master Data, Pricing & Settings

The Admin section is where you set up and configure the whole system: the people who can log in, the reference lists every other screen relies on, how prices are calculated, and your company-wide options. Most day-to-day staff will only visit a few of these screens, but everything that powers the bookings, quotes, and scheduling lives here.

Getting your bearings

Admin Dashboard

The Admin Dashboard is your starting point. It gives you a one-glance health check of the system and fast shortcuts to the things you set up most often.

Figure: The Admin Dashboard with KPI cards, Quick Actions, and Recent Activity

What you see on this screen

- **KPI cards** (each one is clickable and opens the matching list):
 - Active Users
 - Active Facilities
 - Service Types
 - Pricing Rules
 - Equipment Items
 - Audit Events Today

- **Quick Actions grid** with one-click buttons: Add User, Add Facility, Pricing Rules, Audit Log, Master Data, Healthcare Staff.
- **Recent Activity feed** showing the most recent audited changes in the system.

How to use it

1. Read the **KPI cards** at the top to see current totals at a glance.
2. Click any **KPI card** to jump straight into that list (for example, click *Active Users* to open the user list).
3. Use a **Quick Action** button to start a common task immediately — for example, *Add User* opens the new-user wizard, or *Add Facility* opens a new facility form.
4. Scan the **Recent Activity feed** to see what was changed recently and by whom.

TIP When you are not sure where to start, the Quick Actions grid covers the most common admin jobs, so you rarely need to hunt through menus.

People & access

Users & Roles

This is the list of internal user accounts — the people who can log in to the system. Crucially, this is also where you control **what each person is allowed to see and do**, by assigning them a role.

NAME	EMAIL	PHONE	ACCESS ROLE	COMPANY	STATUS
Admin HCMC	ahcmc		Admin	VIET UC	ON
Admin Hanoi	ahanoi		Admin	VIET UC	ON
Bui Van Khoa	khoa.bv			VIET UC	ON
CRM	crm		CRM	VIET UC	ON

Mitchell Admin	ash@biztinct.com	+1 555-555-5555		VIET UC	ON
Nguyen Thi Huong	huong.nt			VIET UC	ON
Nguyen Van Minh	minh.nv		Branch Manager	VIET UC	ON
Nurse Alpha	nurse			VIET UC	ON
Nurse HCMC	nursehcmc		Nurse	VIET UC	ON
Nurse Hanoi	nursehanoi		Nurse	VIET UC	ON
Owner	owner		Owner	VIET UC	ON
Pham Duc Anh	anh.pd			VIET UC	ON
Test	test			VIET UC	ON

Figure: The Users & Roles list of internal accounts

What you see on this screen

- A list of all internal user accounts.
- A button/option to create a new user, which opens a user wizard.

How roles control access

A role bundles together the permissions (groups) that decide which menus and records a person can see. Some examples:

Role	What they can see
Nurse	Only their assigned bookings and the clients in their catchment
Operations Manager	All bookings in their catchment
Finance	Finance-related records
Owner / Admin	Everything

How to use it

1. Open **Users & Roles** to view the list of accounts.
2. To add a person, start a new user — this opens the **user wizard**.
3. In the wizard, enter the person's **name**, their **login / email**, and assign a **role**. The role automatically applies the right permissions and groups.
4. Save the user. They can now log in and will only see the menus and records their role allows.
5. To change what an existing person can access, open their account and **change their role / groups** here.

NOTE Visibility is driven entirely by the assigned role. If someone says they "can't see" a booking or client, the fix is almost always to review and adjust their role on this screen.

Reference data the whole app uses

Master Data

Master Data is a tabbed navigator over all the reference (lookup) tables that the rest of the app draws from. Anything that appears in a dropdown elsewhere — service types, symptoms, insurance providers, and so on — is defined and maintained here.

Figure: The Master Data tabbed navigator over reference tables

What you see on this screen

A set of tabs, each one a simple list-plus-form for a single reference table:

- **Facilities** — clinics / home-care centres
- **Catchments** — geographic service areas (these drive client and staff matching)
- **Service Types**
- **Symptoms**
- **Referral Sources**
- **Insurance providers**
- **Urgency levels**
- **Patient Categories**
- **Medical Specialties**
- **Districts**

How to use it

1. Open **Master Data** and choose the **tab** for the list you want to manage (for example, *Service Types*).
2. To add an entry, create a new record in that tab's list and fill in the form.
3. To change an entry, open it from the list and edit it.
4. Save. The new or updated entry now appears in the matching **dropdowns across the app**.

TIP Keep Catchments accurate — they drive which clients and staff get matched together, so an out-of-date catchment can affect who gets assigned to bookings.

Pricing

Pricing holds the rules that the quote engine uses to calculate charges automatically. When a booking is quoted, these rules add the right amounts without anyone keying them in by hand.

	RULE NAME	REGION/CA...	ITEM CODE	APPROVAL ...	PRICING E...	APPLY ON	RULE LEVEL	RULE TYPE	CONDITIO...	OPERATOR	CONDITIO...	ACTION TY...

Figure: The Pricing rules used by the quote engine

What you see on this screen

- **Pricing rules**, which can depend on factors such as:
 - Distance (distance bands / per-km)
 - Zone
 - Service type
 - Time
 - Urgency
- **Pricing engines**
- **Healthcare packages**

How to use it

1. Open **Pricing** to see the existing rules.

2. To add a charge, create a new **pricing rule** and choose what it depends on (for example, a distance band, a zone, a service type, a time, or an urgency level) and the amount it adds.
3. Save the rule. From then on, the **quote engine** applies it automatically when a matching booking is quoted.
4. Manage your **pricing engines** and **healthcare packages** from the same screen as needed.

NOTE The driving distance calculated on a booking feeds the distance-based rules here, so travel charges are applied automatically — you do not need to add them by hand.

Staff, equipment & scheduling

Healthcare Staff

This is the master list of your healthcare staff (nurses and doctors). What you record here decides who can be assigned to bookings.

Figure: The Healthcare Staff master list

What you see on this screen

- A list of all healthcare staff.
- For each person, their profile, role, facility / catchment, skills, and service areas.

How to use it

1. Open **Healthcare Staff** to view the list.
2. To add someone, create a new staff record and fill in their **profile, role, facility / catchment, skills, and service areas**.
3. To update someone, open their record and edit these details.
4. Save. These details drive **who can be assigned to bookings** — for example, matching staff skills and service areas to a booking's needs.

TIP Keep each person's catchment, skills, and service areas current so the system suggests the right people when bookings are assigned.

Equipment

Equipment is your inventory of portable equipment that can be attached to bookings.

Figure: The Equipment inventory

What you see on this screen

- A list of portable equipment items.

How to use it

1. Open **Equipment** to view the inventory.
2. To add an item, create a new equipment record and save it.

- The item is then available to be **attached to bookings**.

Public Holidays

A calendar of public holidays that affect scheduling and pricing. Add the dates here so the system knows which days are holidays when it schedules visits and calculates quotes.

Compliance & configuration

Audit Log

A read-only record of who changed what and when, kept for compliance. You cannot edit it — you use it to look back and confirm what happened. The Recent Activity feed on the dashboard is a quick window into the same information.

Figure: The Audit Log of changes

Field Requirements

This is where you configure which form fields are mandatory. Use it to make sure staff fill in the information you consider essential before they can save a record.

Figure: The Field Requirements configuration

CMS Sidebar Config

An advanced screen that defines the left-hand menu itself — the sections and the items inside them. Changing it reshapes the navigation everyone sees, so it is normally only touched during setup.

Figure: The CMS Sidebar configuration

WARNING Because the CMS Sidebar Config controls the menus for all users, only change it when you are confident about the effect — a wrong edit can hide menus people rely on.

Settings

Settings is the home for system-wide configuration — the company-wide options that apply to everyone.

Figure: The system Settings screen

What you set here

- Map provider / API key
- Invoicing options
- Integrations

How to use it

1. Open **Settings**.
2. Find the option you need (for example, the **map provider / API key**, **invoicing**, or an **integration**).
3. Enter or update the value and save. The change applies across the whole company.

NOTE These are company-wide options, so a change here affects every user — set them once during setup and revisit only when something like an API key or integration needs updating.

Mobile Nurse App

The Mobile Nurse App is what field nurses use on their phone to see their visits, open patient details, start and complete services, and stay in sync with the office. It is a Progressive Web App (PWA), which means it runs in your phone's web browser but can behave just like a regular app.

Getting Started

Opening and Installing the App

This is the very first thing you do on your phone before any visit. You open the app in your browser, log in once, and (optionally) add it to your Home Screen so it opens like a normal app from then on.

How to use it:

1. Open your phone's web browser and go to **care.biztinct.com/health_pwa**.
2. Log in with your nurse account (the same username and password the office gave you).
3. To make it behave like a real app, use your browser's **Add to Home Screen** option. An app icon appears on your phone, and tapping it opens the Nurse App directly.

TIP Adding it to your Home Screen means you no longer have to type the web address each time. Just tap the icon.

NOTE The app caches (saves) data on your phone so it keeps working even with poor signal. Your changes sync back automatically once you are online again.

The Bottom Navigation and Top Header

Wherever you are in the app, the same bottom navigation and top header are always available, so you can move around quickly.

- **Bottom navigation (four tabs):** Booking, Patients, Call, Profile. Tap a tab to switch to that screen.
- **Top header language switch (VI/EN):** tap to switch the app between Vietnamese and English.
- **Notifications bell:** shows a count of new notifications; tap it to view them.

NOTE When a new version of the app is available, a banner appears. Tap **Update Now** to refresh to the latest version.

Booking Tab

The Booking tab is your home base for the day. It shows your assigned visits and lets you view them by Day, Week, or Month.

Booking — Day View

Use the Day view to see everything scheduled for a single day, one visit per card. This is the view you will use most while out on visits.

Figure: Day view listing each visit as a card with time, status, and quick actions

What you see on this screen:

- A header with the current **date**, a **Today** button, **previous/next** arrows, and a **calendar picker** to jump to any date.
- A **Day / Week / Month** switcher to change how visits are displayed.
- A **visit card** for each appointment, showing:
 - The **time** and **duration** of the visit.
 - The **status** (for example, Completed or Assigned).
 - The **client name and ID**.
 - The **service type**.
 - Quick **Call** and **Map** buttons.

How to use it:

1. Tap **Today** to jump back to the current day's visits at any time.

2. Tap the **previous/next** arrows to move one day at a time, or tap the **calendar picker** to jump straight to a specific date.
3. On a visit card, tap **Call** to phone the client, or tap **Map** to get directions to the visit location.
4. Tap anywhere else on the visit card to open its detail sheet (see **Opening a Booking** below).

TIP The status on each card updates in real time, so you can always see at a glance which visits are done and which are still ahead of you.

Booking — Week View

Use the Week view when you want to see how your visits are spread across the whole week.

Figure: Week view grouping visits by day

What you see on this screen:

- The same date header and **Day / Week / Month** switcher.
- Your visits **grouped by day** across the week.

How to use it:

1. Tap **Week** in the switcher to open this view.
2. Use the **previous/next** arrows or the **calendar picker** to move between weeks.
3. Tap any visit to open its detail sheet.

Booking — Month View

Use the Month view to get a big-picture overview of which days have visits scheduled.

Figure: Month view as a calendar with dots on days that have visits

What you see on this screen:

- A full **calendar** for the month.
- **Dots** on the days that have visits scheduled.

How to use it:

1. Tap **Month** in the switcher to open this view.
2. Look for the **dots** to spot which days have visits.
3. Tap a day to see its visits.

Opening a Booking and the Nurse Service Flow

Tapping a visit opens its detail sheet, where you carry out the visit step by step using the service action buttons. This is the core of your daily work in the app.

Figure: Booking detail sheet with the service action buttons

What you see on this screen:

- The visit's details.
- The **service action buttons** that walk you through the visit (Accept, Start Service, Complete).

How to use it (the nurse service flow):

1. **Accept** the assignment to confirm it. This tells the office you have taken on the visit.
2. On arrival, tap **Start Service** to start the visit timer.
3. **Record your clinical notes** during the visit.
4. When you are finished, tap **Complete** to close out the service.

Button	What it does
Accept	Confirms the assignment
Start Service	Starts the visit timer (tap on arrival)
Complete	Marks the service finished

NOTE As you move through these steps, the booking status updates in real time and syncs back to the office, so the team always sees your current progress.

Patients Tab

Patients List

The Patients tab lets you look up the people in your care so you can review their details before or during a visit.

Figure: Patients tab with searchable patient list and details

What you see on this screen:

- A **search** box to find a patient.
- The **patient list** and patient **details**, limited to the patients within your catchment (your assigned area).

How to use it:

1. Type a name in the **search** box to find a patient.
2. Tap a patient to view their details.

NOTE You only see patients within your catchment area.

Call Tab

One-Tap Clinic Call

The Call tab is a quick shortcut to phone the clinic whenever you need to reach the office.

Figure: Call tab with one-tap dial to the clinic's phone number

How to use it:

1. Tap the **Call** tab.
2. Tap to **dial the clinic's phone number** in one tap.

Profile Tab

Your Profile, Sync, and Log Out

The Profile tab shows who you are signed in as and gives you the controls to sync your data and log out securely.

Figure: Profile tab showing name and email, Sync Data, and Log Out

What you see on this screen:

- Your **name** and **email**.
- A **Sync Data** button.
- A red **Log Out** button.

How to use it:

1. Tap **Sync Data** to pull the latest data from the office and push up any changes you made while offline.
2. Tap **Log Out** when you are done using the app.

Button	What it does
Sync Data	Pulls the latest data and pushes your offline changes
Log Out	Signs you out and clears cached patient data from the device

WARNING Logging out clears the cached patient data stored on the device for privacy. Only log out when you intend to fully sign off, and make sure you have synced any offline changes

first.

TIP If something looks out of date, tap **Sync Data** to refresh. This is also how your offline changes reach the office once you have signal again.

Appendix — Glossary, Statuses & Roles

This appendix is your quick-reference guide. Whenever you see a status label, a colour, or a role name in the CMS and you are not sure what it means, come back here. Keep it open in a second tab while you learn the system.

Statuses at a Glance

These are the labels you will see most often on records throughout the CMS. Each one tells you where a record is in its journey.

Booking States

A booking moves through these states from the moment it is created until it is finalised. The state controls what you can do with the booking next.

What you see on this screen:

State	Meaning
Draft	Created, but not yet confirmed
Confirmed / Booked	Client confirmed, and the booking has a quote
Assigned	A staff member has been assigned to the booking
In Progress	The service is currently running
Completed	The service is done
Completed-Pending-Invoice	Done by part-time staff; the office still needs to invoice it
Cancelled	The booking was cancelled
Closed	Finalised and locked

NOTE "Completed-Pending-Invoice" is not the same as "Completed." It means the service is finished but billing is still outstanding, so the office must raise the invoice before the booking can be closed.

Contact Statuses

A contact status tells you what kind of relationship you have with a person or lead, so you know who needs follow-up and who has already booked.

What you see on this screen:

Status	Meaning
Active / Initial Contact	A new or active contact
Lead	A contact to follow up with
Booking	This contact has booked a service

Lost Booking	A booking opportunity that did not convert
Spam	Junk or unwanted contact

Assignment Statuses

An assignment status follows a single staff member's progress on a job, from the moment they are assigned to the moment they finish.

What you see on this screen:

Status	Meaning
Assigned	The nurse has been assigned to the job
Confirmed	The nurse has accepted the job
In Progress	The nurse has started the job
Completed	The nurse has finished the job
Cancelled	The assignment was cancelled

NOTE An assignment normally flows Assigned → Confirmed → In Progress → Completed. It can be Cancelled at any point.

Payment Statuses

A payment status tells you where the money is, which is especially important when nurses collect cash in the field.

What you see on this screen:

Status	Meaning
Collected	Payment has been taken
Pending Delivery	Cash is with the nurse, not yet handed in at the office
Delivered / Reconciled	Cash has reached the office and the books match
Failed / Refunded	The payment failed or was refunded

WARNING A status of "Pending Delivery" means real cash is still out with a nurse. It is not money in the office until it shows as "Delivered / Reconciled."

Roles & Visibility

Your role decides which screens and records you can see. This keeps each person focused on the records that belong to them.

Who Sees What

What you see on this screen:

Role	What they see
Nurse	Only the bookings they are assigned to, plus clients in their own catchment area
Operations Manager	All bookings and clients in their catchment
Finance	The Finance screens
Owner / Administrator	Everything

NOTE A user can be given more than one role. Their access is the combination of all their roles, so someone who is both Finance and Operations Manager sees both sets of screens.

Handy Tips for New Users

These small habits will make day-to-day work in the CMS much faster.

- **Change every figure at once:** use the period filter on a dashboard to update all the figures on that dashboard together.
- **See the records behind a number:** click any KPI card to open the list of records that make up that number.
- **Go back a step:** use the breadcrumb in the top-left corner to return to the previous screen.
- **Check a record's history:** the chatter on a record logs its full history, so you can see what happened and when.
- **Ask for help:** the AI Coach in the bottom-right corner can answer your questions.

TIP When a number on a dashboard looks surprising, click the KPI card to drill into the actual records behind it before raising a concern. The detail almost always explains the figure.
