

Echocardiogram

Bringing essential heart care closer to home

\$350,000 raised by our community

A locally based service for Taupō and Tūrangi patients

In 2018, the Taupō Hospital & Health Society committed to raising \$350,000 to purchase an echocardiogram machine for Taupō Hospital. Until then, local patients needing this important heart scan often had to travel to Rotorua for testing.

With the generosity of our community, the fundraising goal was achieved and the equipment was purchased in 2019. The new service enabled cardiac assessments to be carried out closer to home, reducing travel and making care more accessible for people throughout the Taupō and Tūrangi region.

A lasting benefit for our community

Today, the machine is used five days a week - two days for echocardiograms and three days for ultrasound services. It is a wonderful example of community support creating a practical, enduring improvement in local healthcare.
